

Security Event Manager

An all-in-one SIEM solution for log collection, storage, analysis, and reporting designed to help IT pros identify and respond to cyberthreats and demonstrate compliance.

Thousands of resource-constrained IT and security pros rely on SolarWinds® Security Event Manager (SEM) for affordable and efficient threat detection, automated incident analysis and response, and compliance reporting for their IT infrastructure. Our SIEM solution combines log management, threat detection, normalization and correlation, forwarding, reporting, file integrity monitoring, user activity monitoring, USB detection and prevention, threat intelligence, and active response in a virtual appliance that's easy to deploy, manage, and use. We've designed our SIEM to provide the functionality you need without the complexity and cost of most other enterprise SIEM solutions.

SECURITY EVENT MANAGER AT A GLANCE

- » Collects, consolidates, normalizes, and visualizes logs and events from firewalls, IDS/IPS devices and applications, switches, routers, servers, OS, and other applications
- » Performs real-time correlation of machine data to identify threats and attack patterns
- » Responds to suspicious activity automatically with Active Response, including blocking USB devices, killing malicious processes, logging off users, and more
- » Eases compliance reporting and audits with out-of-the-box reports and filters for HIPAA, PCI DSS, SOX, ISO, DISA STIGs, FISMA, FERPA, NERC CIP, GLBA, and more
- » Offers an intuitive interface and ample selection of out-of-the-box content, meaning you don't need to be a security or compliance expert to get value from SolarWinds SEM
- » Affordable, scalable licensing based on log-emitting sources, not log volume

Easy Collection and Normalization of Network Device and Machine Logs

Security Event Manager comes with hundreds of **out-of-the-box connectors** to simplify the process of collecting, standardizing, and cataloging log and event data generated across your network. Our industry leading log compression rate allows more data to be stored with fewer resources required.

Customizable Visualizations and Dashboard

Quickly identify important or suspicious patterns in machine data with a wide variety of customizable visualizations and a flexible dashboard. Drill into interesting patterns with a click of a button and see the full list of related logs and their details.

Powerful and Simple Searching for Forensic Analysis and Troubleshooting

Security Event Manager is designed to allow users to quickly find important log data using simple keyword searches in both real-time event data as well as historical data at predefined or custom time periods. Out-of-the-box and user-defined filters also provide fast data refinement.

Real-Time, In-Memory Event Correlation

By processing and normalizing log data before it's written to the database, Security Event Manager can deliver true real-time log and event correlation. Predefined and custom correlation rules allow Security Event Manager to automatically alert on possible security breaches and other critical issues.

Out-of-the-Box Security and Compliance Reporting Templates

Security Event Manager makes it easy to generate and schedule compliance reports quickly using over 300 report templates and a console allowing for customizable reports to meet your organization's specific needs.

Threat Intelligence Feed and Groups

Correlation rules are enhanced with a fully-integrated, regularly updating threat intelligence feed that automatically identifies and tags malicious activity from known bad IPs. Easily build groups containing values relevant to your environment, such as user and computer names, sensitive file locations, and approved USB devices. These groups can be auto-populated via correlation rules and can help simplify searching and reporting.

Built-in Active Response

Security Event Manager can do much more than trigger email alerts. SEM is designed to immediately respond to security, operational, and policy-driven events using predefined responses, such as quarantining infected machines, blocking IP addresses, killing processes, and adjusting Active Directory® settings.

Enhanced, Real-Time File Integrity Monitoring

Embedded File Integrity Monitoring (FIM) is designed to deliver broader compliance support and deeper security intelligence for insider threats, zero-day malware, and other advanced attacks. Leverage enhanced filter capabilities for finer tuning and significantly reduce the noise associated with lower priority file changes, increasing productivity and efficiency.

USB Detection and Prevention

Security Event Manager can help prevent endpoint data loss and protect sensitive data with real-time notifications when USB devices connect, the ability to automatically block their usage, and built-in reporting to audit USB usage.

Log Forwarding and Exporting

Security Event Manager forwards raw log data with syslog protocols (RFC 3164 and RFC 5244) to other applications for further use. Additionally, users can export logs to a CSV file so the data can be shared with other teams and external vendors, uploaded to other tools, or attached to helpdesk tickets.

LIVE AND HISTORICAL EVENTS

See events stream in near real time on the Live Events tab. You can also see key trends by analyzing historical data via simplified network event searches in the Historical Events tab. The intuitive query builder presents tips and suggestions as you enter query parameters; then the event histogram and custom time picker allow you to zero in on specific results in a designated time span. Plus, you can save, load, browse, or schedule common searches in the historical events tab.

SECURITY EVENT MANAGER SYSTEMS REQUIREMENTS

To see all systems requirements and to determine deployment size, see SEM system requirements in the [SEM Install or Upgrade Guide](#).

TRY BEFORE YOU BUY—DOWNLOAD A FREE TRIAL

Don't just take our word for it. At SolarWinds, we believe you should try our software before you buy. That's why we offer free trials that deliver full product functionality. Simply download Security Event Manager, and you can be up and analyzing your log files in less than an hour. It's that simple. [Download your free, fully functional trial today.](#)

ABOUT SOLARWINDS

SolarWinds (NYSE:SWI) is a leading provider of powerful and affordable IT management software. Our products give organizations worldwide—regardless of type, size, or complexity—the power to monitor and manage their IT services, infrastructures, and applications; whether on-premises, in the cloud, or via hybrid models. We continuously engage with technology professionals—IT service and operations professionals, DevOps professionals, and managed services providers (MSPs)—to understand the challenges they face in maintaining high-performing and highly available IT infrastructures and applications. The insights we gain from them, in places like our **THWACK**® community, allow us to solve well-understood IT management challenges in the ways technology professionals want them solved. Our focus on the user and commitment to excellence in end-to-end hybrid IT management has established SolarWinds as a worldwide leader in solutions for network and IT service management, application performance, and managed services.
